

In re Application of PARDIKAR et al.
Serial No. 10/052,039

Listing of the Claims:

1. (currently amended) In a computer network, a method comprising:
receiving at an I/O manager an I/O request initiated from an application program directed to a file on a WebDAV server;
directing the I/O request to a WebDAV redirector for communicating with the WebDAV server to determine whether the request can be handled by obtaining capability information from the WebDAV server, and if so, requesting a file system to create the file, downloading the file to a local cache of the file system, and returning a file handle corresponding to the file in the local cache to the application program;
providing access to the file in the local cache of the file system via the file handle; and
receiving a request to close the file via the file handle, and when received, uploading the file from the local cache of the file system to the WebDAV server.
2. (original) The method of claim 1 wherein receiving an I/O request initiated from an application program comprises, receiving a Universal Resource Identifier corresponding to a file on the WebDAV server.
3. (original) The method of claim 1 wherein receiving an I/O request initiated from an application program comprises, receiving a filename and an identifier previously mapped to a share on the WebDAV server.

In re Application of PARDIKAR et al.
Serial No. 10/052,039

4. (original) The method of claim 1 wherein communicating with the WebDAV server to determine whether the request can be handled, comprises, issuing an HTTP OPTIONS request, and evaluating a response therefrom.

5. (original) The method of claim 1 wherein communicating with the WebDAV server to determine whether the request can be handled, comprises, issuing a WebDAV PROPFIND request directed to a share on the WebDAV server, and evaluating a response therefrom.

6. (original) The method of claim 5 wherein the WebDAV server returns property information in response to the WebDAV PROPFIND request directed to the share, and further comprising, maintaining the property information in a local data structure.

7. (original) The method of claim 1 wherein communicating with the WebDAV server to determine whether the request can be handled, comprises, issuing a WebDAV PROPFIND request directed to the file on the WebDAV server, and evaluating a response therefrom.

8. (original) The method of claim 7 wherein the WebDAV server returns property information in response to the WebDAV PROPFIND request directed to the file, and further comprising, maintaining the property information in a local data structure.

In re Application of PARDIKAR et al.
Serial No. 10/052,039

9. (original) The method of claim 1 wherein communicating with the WebDAV server to determine whether the request can be handled, comprises:

a) issuing an HTTP OPTIONS request, evaluating a corresponding response, and determining that the server is a WebDAV server;

b) issuing a WebDAV PROPFIND request directed to a share on the WebDAV server, evaluating a corresponding response, and determining that the share exists on the WebDAV server, the response including share property information; and

c) issuing a WebDAV PROPFIND request directed to the file, evaluating a corresponding response, and determining that the file exists, the response including file property information.

10. (original) The method of claim 9 further comprising, maintaining the share property information and the file property information in at least one local data structure.

11. (original) The method of claim 1 wherein communicating with the WebDAV server indicates that the request can be handled, and further comprising, communicating with at least one other local component to indicate that at least this request can be handled.

In re Application of PARDIKAR et al.
Serial No. 10/052,039

12. (previously presented) The method of claim 1 further comprising, determining that the file is encrypted on the WebDAV server, and wherein downloading the file to a local cache of the file system comprises, communicating with the file system to create an image of the file in the local cache that is also encrypted.

13. (original) The method of claim 12 further comprising, communicating with the file system to open the image of the file such that the file system will transparently decrypt file data on read requests and will transparently encrypt file data on write requests to the file.

14. (previously presented) The method of claim 12 wherein uploading the file from the local cache of the file system to the WebDAV server comprises, communicating with the file system to read data from the local image of the file such that the file will be uploaded as the encrypted image thereof.

15. (original) A computer-readable medium having computer-executable instructions for performing the method of claim 1.

In re Application of PARDIKAR et al.
Serial No. 10/052,039

16. (currently amended) A computer-implemented method, comprising:
receiving at a local application programming interface layer an application request that relates to a Uniform Resource Identifier;
providing information corresponding to the request to a local WebDAV-redirector; and
determining at the WebDAV redirector whether a server identified via the application request comprises a WebDAV-enabled server by obtaining capability information from the server, and if so, handling the request.

17. (original) The method of claim 16 wherein the application request includes the Universal Resource Identifier.

18. (original) The method of claim 16 wherein the application request includes an identifier that has been previously mapped to at least part of the Universal Resource Identifier.

19. (previously presented) The method of claim 16 wherein providing information corresponding to the request to a local WebDAV redirector comprises polling a set of at least one redirector.

20. (previously presented) The method of claim 16 wherein providing information corresponding to the request to a local WebDAV redirector comprises polling a set of at least one network provider.

In re Application of PARDIKAR et al.
Serial No. 10/052,039

21. (original) The method of claim 16 wherein the application request comprises an I/O request directed to a file, and wherein handling the request comprises creating a local file corresponding to the I/O request.

22. (original) The method of claim 21 wherein handling the request further comprises, downloading at least some file data from the WebDAV server to the local file.

23. (original) The method of claim 21 wherein handling the request further comprises, returning a file handle corresponding to the local file to the application.

24. (original) The method of claim 16 wherein the application request comprises a networking request to browse a network share on the WebDAV server, and wherein handling the request includes enumerating information of the network share.

25. (previously presented) The method of claim 16 wherein determining at the WebDAV redirector whether the server identified via the application request comprises a WebDAV-enabled server includes, issuing an HTTP OPTIONS request to the server, and evaluating a corresponding response.

In re Application of PARDIKAR et al.
Serial No. 10/052,039

26. (original) The method of claim 25 wherein the application program's request indicates a share on the WebDAV server, and further comprising, issuing a WebDAV PROPFIND request directed to the share on the WebDAV server.

27. (original) The method of claim 26 wherein the application program's request further indicates a file on the share on the WebDAV server, and further comprising, issuing a WebDAV PROPFIND request directed to the file.

28. (previously presented) The method of claim 16 wherein the application request comprises an I/O request directed to an encrypted file, and further comprising, automatically decrypting the data locally when downloading the encrypted file from the WebDAV server and automatically encrypting the data locally when uploading the encrypted file to the WebDAV server.

29. (original) The method of claim 16 wherein the application request comprises an I/O request directed to a file that is encrypted on the WebDAV server, and wherein handling the request comprises, creating a local file corresponding to the I/O request, and downloading an image of the file on the WebDAV server to the local file, wherein the local file is written by a local file system such that the image corresponds to the encrypted image on the WebDAV server.

In re Application of PARDIKAR et al.
Serial No. 10/052,039

30. (original) The method of claim 29 further comprising, communicating with the file system to open the local file such that the file system will transparently decrypt file data read on read requests and will transparently encrypt file data written on write requests.

31. (original) The method of claim 30 further comprising, detecting a request to close the local file, closing the local file, communicating with the file system to open the local file such that the file will not be decrypted when read, and uploading the file to the WebDAV server as an encrypted file.

32. (original) A computer-readable medium having computer-executable instructions for performing the method of claim 16.

33. (previously presented) In a computer network, a system comprising, an application program that issues WebDAV-related requests, including at least one request having an identifier corresponding to a WebDAV server; a WebDAV redirector, the WebDAV redirector configured to communicate with a network server to obtain capability information thereof, and to evaluate the capability information to determine whether the network server comprises a WebDAV-enabled server; and

when the capability information indicates that the network server is WebDAV-enabled, the WebDAV redirector locally handling each request corresponding to the WebDAV server that can be handled locally, and

In re Application of PARDIKAR et al.
Serial No. 10/052,039

communicating with the WebDAV server to handle requests that cannot be handled locally.

34. (original) The system of claim 33 wherein the identifier corresponding to a WebDAV server issued by the application comprises a Universal Resource Identifier.

35. (original) The system of claim 33 wherein the identifier corresponding to a WebDAV server issued by the application comprises an identifier previously mapped to a share on the WebDAV server.

36. (previously presented) The system of claim 33 wherein the WebDAV redirector receives requests from the application via an application programming interface.

37. (previously presented) The system of claim 33 wherein the application program issues I/O requests directed to a WebDAV file, and wherein the WebDAV redirector receives the I/O requests from a manager component.

In re Application of PARDIKAR et al.
Serial No. 10/052,039

38. (previously presented) The system of claim 33 wherein the application program issues I/O requests directed to a WebDAV file, and wherein the WebDAV redirector:

- a) creates a local representation of the file;
- b) determines whether the file exists on the WebDAV server, and if so, downloads at least some of the data from the WebDAV server file to the local representation of the file;
- c) returns a file handle corresponding to the local representation of the file to the application program;
- d) receives I/O read and write requests associated with the file handle and handles the I/O read and write requests via the local representation of the file; and
- e) receives an I/O close request associated with the file handle, and handles the I/O close request by closing the local representation of the file and uploading at least part of the local representation of the file to the WebDAV server.

39. (previously presented) The system of claim 38 wherein the WebDAV file is encrypted, and wherein WebDAV redirector creates the local representation of the file by:

- a) requesting the file system to create a local file that is opened such that transparent encryption and decryption are not enabled therefor,
- b) downloading at least some of the encrypted file data by requesting the file system to write to the local file without translation thereof, and
- c) requesting the file system to close the local file.

In re Application of PARDIKAR et al.
Serial No. 10/052,039

40. (previously presented) The system of claim 39 wherein the WebDAV redirector handles I/O read and write requests from the application by requesting the file system to reopen the local file such that reads therefrom are decrypted and writes thereto are encrypted.

41. (previously presented) The method of claim 40 wherein when the WebDAV redirector handles the I/O close request, and before uploading the file, the WebDAV redirector closes the local representation of the file, and reopens the local file by requesting the file system to open the file such that reads therefrom are not decrypted.
